## HEART SUPPORT DIETS

Your vet has suggested that your pet may benefit from a diet, to help manage their cardiac condition – here is how diet can help.

These diets are very moderate in sodium and exceptionally high in omega-3 fatty acids from fish and krill to support maintenance of lean body mass, appetite, normal cardiac rhythm and blood pressure.

These diets also contain L-carnitine and taurine to support a healthy heart function.

In dogs with cardiac failure where also kidney or liver function is reduced, Heart & Kidney Support is recommended. For dogs with cardiac disease with normal kidney function, Skin Function Support is recommended
