RECOMMENDED
DIET BY CONDITION*

**GASTROINTESTINAL
DIETS FOR CATS**

**FID & FIW
Digestive Support**

- **AuraGuard**, supporting gut barrier integrity and a healthy microbiome
- **Postbiotics** supporting a healthy gut microbiome
- **Highly digestible ingredients** and low fibre maximizing digestibility and nutrient absorption
- **High vitamin and minerals content** to compensate for less efficient absorption
- **Increased level of electrolytes** to compensate for losses from diarrhoea and vomiting
- **Beta-glucans** and **beneficial fibres** to support the immune response and intestinal health

**FQD-HY & FQW-HY
Allergen Management Plus**

- **High levels of omega-3** from fish oils
- **Made with hydrolysed salmon** giving high digestibility and low allergenicity
- **High vitamin and minerals content** to compensate for less efficient absorption
- **Increased level of electrolytes** to compensate for losses from diarrhoea and vomiting

**FDD-HY & FDW
Food Allergen Management**

- **Contains a restricted number of ingredients** and are based on low allergen, highly digestible ingredients, lamb, hydrolysed salmon protein, rice
- **High vitamin and minerals content** to compensate for less efficient absorption
- **Increased level of electrolytes** to compensate for losses from diarrhoea and vomiting

FRD & FRW Weight Reduction

- **The increased insoluble and soluble fibre** content in these diets supports gastrointestinal motility
- **The low fat content** makes the diets suitable for management of cholestasis, and conditions that benefit from low fat intake
